

Simplicity Investment Funds

NZ Bond Fund

Fund update

This update was first made publicly available on 25 July 2019

Fund update

Quarter ending 30 June 2019

What is the purpose of this update?

This document tells you how the Simplicity NZ Bond Fund (NZ Bond Fund) has performed and what fees were charged. The document will help you to compare the fund with other funds. Simplicity NZ Limited prepared this update in accordance with the Financial Markets Conduct Act 2013. This information is not audited and may be updated.

Description of this fund

The NZ Bond Fund invests in New Zealand government bonds and investment grade, liquid bonds issued in New Zealand dollars, designed to be the New Zealand bond component of a diversified investment portfolio.

Total value of the fund	\$ 137,055,629
The date the fund started	3 April 2018

What are the risks of investing?

Risk indicator for the NZ Bond Fund¹:

Risk indicator

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at <https://www.sorted.org.nz/guides/kiwisaver-which-fund-suits>

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of the fund's future performance. As the fund has not been in existence for five years, the risk indicator is based on five year information including actual performance figures from 3 April 2018, and market returns data for the period prior to that date. As a result of this, the risk indicator may provide a less reliable indicator of the potential future volatility of the fund. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will continue to be updated in future fund updates.

See the product disclosure statement (PDS) for more information about the risks associated with investing in this fund.

How has the fund performed?

PAST YEAR

Annual return (after deductions for charges and tax)	5.96%
Annual return (after deductions for charges but before tax)	8.36%
Market index annual return (reflects no deduction for charges and tax)	8.18%

The market index annual return is the Bloomberg NZBond Govt 0+ Yr Index.

Additional information about the market index is available on the Disclose Register:

<http://www.companiesoffice.govt.nz/disclose>

What fees are investors charged?

Investors in the NZ Bond Fund are charged fund charges. Based on the PDS dated 8 July 2019 these are expected to be:

Total fund charges (including GST)	0.10%
------------------------------------	-------

Which are made up of

Total management and administration charges	0.10%
---	-------

Including:

Manager's basic fee	0.10%
Other management and administration charges	0.00%
Total performance-based fees	0.00%

Other charges

Dollar amount per investor

Administration Fee	\$30 per year
--------------------	---------------

Investors are not charged individual action fees for specific actions or decisions (for example, for withdrawing from or switching funds).

Example of how this applies to an investor

Small differences in fees and charges can have a big impact on your investment over the long term.

Mia had \$10,000 in the fund at the start of the year and did not make any further contributions. At the end of the year Mia received a return after fund charges were deducted of \$596 (that is 5.96% of her initial \$10,000). Mia also paid \$30 in other charges. This gives Mia a total return after tax of \$566 for the period.

Notes

1. As the fund started on 3 April 2018, actual returns for the fund are not available until then. To calculate the risk indicator for the five-year period ending 30 June 2019, market index returns have been used up to 31 March 2018 with actual fund returns used for the balance of the period. As a result of those market returns, the risk indicator may provide a less reliable indicator of the potential future volatility of the fund.
